

ABSTRACT

A problem of the invention is to provide a heating cooker capable of producing a uniform baking mark at a total of an object at inexpensive cost by a single piece of a
5 rod-like heater in a heating cooker interposing a face member between the object and the rod-like heater.

A heating cooker (100) for heating to process an object placed on a mounting
base of a heating chamber (51) including at least a single piece of a rod-like heater
arranged along a face member forming the heating chamber (51) and a heat shielding
10 member provided along a longitudinal direction of the rod-like heater between the rod-like
heater and the face member (53a) on an outer side of the heating chamber (51).
